Portfolio Website: <https://www.ewantindale.com>

Skills

HTML, CSS, JavaScript, React, React Native, Node.js, SQL, Git

Projects

- [React Twitter](#) (**React, Node.js, TypeScript, PostgreSQL, Docker**) Fullstack project built with React and Node.js. Users can create and delete posts, like others posts and optionally upload a profile picture.
- [Netflix Clone](#) (**React, Firebase**) A recreation of Netflix's main page, allowing users to browse popular movies by genre and watch their trailers. Uses the TMDB API. Built in React and deployed using Firebase Hosting.
- [Workout Tracker Mobile App](#) (**React Native, Redux, Firebase**) - This app guides the user through a workout program designed to build strength and muscle and keeps track of their workouts and progress over time. It has a simple and intuitive user interface, uses Google Sign-In for quick and easy authentication and stores the users data online using Cloud Firestore.
- [The Backyard Larder website](#) (**WordPress, PHP, HTML/CSS**) - I created this website for my parents online gardening business. It includes an online store, blog, and a custom theme and integrates with a MailChimp email marketing list which has grown to over 800 members and now provides them a full-time income.

Experience

- **Full Stack Developer - DataCapture (October 2020 - Present)**
At DataCapture I am working on OPTiMiSe - web-based community transport booking software.
 - Fixing bugs and implementing new functionality across the technology stack, using React, Node.js and MariaDB.
 - Collaborating with senior developers to work on tickets and make UI/UX and system design decisions.
- **Professional Esports Player & Content Creator (2017 - 2020)**
As a competitive player in the online multiplayer game PlayerUnknown's Battlegrounds (PUBG), I built an online audience by creating content on the video live streaming platform Twitch.tv where people would watch me play. I achieved Rank 1 on the European leaderboards a number of times before forming a team with 3 other players and signing with the North American esports organisation Digital Chaos, under which we competed at IEM Oakland 2017 (peak viewership 90,000) and placed 5th overall, being the only team to win two out of the eight games played.
- **Freelance Web Developer (2016 - 2017)**
As a freelancer I worked mostly with WordPress, creating and modifying websites for my online clients through the freelancing platform Fiverr. I always made sure to maintain good communication, deliver on time and above all perform quality work. During this time I maintained a perfect 5 star rating on the site and received, among others, this review:
 - "Ewan was articulate, friendly and provided excellent service. He worked incredibly fast to deliver my project (ninja fast actually!). I'm extremely happy and pleased with his work. I'm also happy to hire Ewan again."

Education

- Studied Computer Science at Bangor University.
- Triple Distinction, BTEC Extended Diploma in Information Technology at East Riding College, Bridlington.
- Achieved A, B, and C in English, Maths and Psychology GCSEs respectively.
